

Most organizations think they're evaluating AI. **They're not.**

They're evaluating software.

The real question is whether the business is **ready for what happens** when every employee suddenly has access to a researcher, analyst, coordinator, writer, and problem-solver that works on demand.

That is the shift — and it is moving faster than most leadership teams realize.

What changed. What matters. What to do before your team runs ahead of your systems.

01 THE SHIFT

From Tool Testing to **Team Systems.**

— May

Individual Experimentation

Employees testing tools on their own.

ChatGPT Claude Copilot Perplexity
Gemini

— Now

Team-Based AI Workflows

Departments using AI to move work faster.

Shared prompts Knowledge libraries
Team workspaces Internal playbooks
Workflow support

— Next

AI Operating Infrastructure

Companies building governed, repeatable systems.

Role-based training Department use cases
Governance rules Workflow automation
Human review points

02 THE 2026 REALITY

01

Your employees are already using AI.

Not officially.
Not consistently.
Not always safely.
But they are using it.

02

The biggest AI risk is invisible use.

Shadow adoption already lives across email, browsers, and side accounts.
You cannot govern what you cannot see.

03

AI does not fix broken processes.

It scales them.
Messy work gets faster. Clean systems get leverage.

03 THE REAL ROI

The Return Is Hiding in Plain Sight.

Find

Locate information across documents and tools.

Draft

Emails, policies, reports, client communications.

Summarize

Meetings, notes, and updates into action.

Standardize

Make recurring work consistent across teams.

Answer

Reduce repeated internal questions.

Report

Scattered updates into leadership insights.

POINT OF VIEW

Most companies do not need an AI agent on day one. They need to stop losing hours to work AI can already support safely.

04 THE PROBLEM MOST COMPANIES MISS

AI exposes operational debt.

- Messy onboarding scales to messy faster.
- Outdated procedures surface outdated answers.
- Inconsistent management decisions spread wider.

**The fix is not more software.
The fix is structure.**

05 THE READINESS CHECK

Before You Roll Out AI, Answer These Five Questions.

01

Where are employees already using AI?

02

Which tasks consume the most time every week?

03

Which decisions must stay human-led?

04

What information should never be entered into AI systems?

05

If AI usage doubled tomorrow, would governance be in place?

Hard to answer? **You are exactly where most organizations are** — and this is where risk begins.

06 THE FYHR POINT OF VIEW

01

AI accelerates work.

02

Humans remain accountable.

03

Speed without control creates risk.

04

If it cannot be defended, it should not be deployed.

START HERE

Start with an AI Opportunity Assessment.

In 60 minutes, we identify what is already moving, what is at risk, and where the first wins live.

- ✓ Where AI is already being used
- ✓ High-impact opportunities by department
- ✓ A practical adoption roadmap
- ✓ Hidden risks & compliance concerns
- ✓ Quick wins that save time immediately
- ✓ Clarity before you buy another tool
